DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with J. Scot Wickem (Reg. #41,376) on 01/06/2007.

IN THE CLAIMS

Independent claim 30, is amended as follows below:

30. (Previously presented) An intravascular device suitable for packaging in a package lumen defined by a package lumen wall, the intravascular device comprising:

an elongate shaft having a proximal portion; and a hub assembly connected to the proximal portion of the elongate shaft, the hub assembly including an interference fit member (IFM) which is configured to form an interference fit with the package lumen wall when the intravascular device is disposed in the package lumen;

wherein an inner diameter of the package lumen wall is smaller than the outer diameter of the IFM such that the IFM deforms the package lumen wall when the IFM is in an interference fit with the package lumen wall; and

wherein the IFM causes the package lumen wall to bulge outwardly when the IFM is disposed within the package lumen wall.

Allowable Subject Matter/Reasons for Allowance

Claims 18, 25-28 and 30-31 are allowed over the prior art of record as amended in the reply filed 10/04/2006 and the Examiner's amendment above. The following is an examiner's statement of reasons for allowance: The claims in this application have been allowed because the prior art of record fails to disclose either singly or in combination the claimed device of an intravascular device with an elongate shaft, a strain relief member, a hub located on the proximal portion of the shaft with an interference fit member (IFM) with one or more rings which is configured to friction fit with a package lumen wall causing the package lumen wall to bulge and contain the intravascular device but permit easy removal of the intravascular device with the inner diameter of the package lumen wall being smaller than the outer diameter of the IFM member.

The closest prior art of record is Diettrich (3,720,210) and Whipple (4,880,414), however these references do not disclose as described above.

Regarding claims 18, 30 and 31, the closest prior art of record fails to teach among all the limitations specific friction fit interference fit connecting with the package lumen to encase the device with the IFM causing the package lumen wall to bulge and contain the intravascular device but still permit easy removal of the intravascular device with the inner diameter of the package lumen wall being smaller than the outer diameter of the IFM member.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion
